

```
root@dnsc:~$ cat resume.pdf
```

# This is a placeholder resume.

The "Download Resume" button on your site points to this file:  
frontend/public/resume.pdf

Replace it with your real resume:

1. Export your actual resume as a PDF.
2. Name it resume.pdf (or update resume\_url in backend/data.py to match whatever filename you use).
3. Drop it into frontend/public/, overwriting this file.

No code changes are needed after that - the download link already points at this path.
